

Quantum Error Correction

Louis Golowich Wenjie Gong Ari Hatzimemos
Dylan Li Dylan Zhou

Physics 160
Harvard University

Final Project Presentation, 13 May 2020

Table of Contents

- 1 Introduction and Review of Quantum Error Correction
- 2 The 3-Qubit Codes
- 3 The Shor Code
- 4 The 7-Qubit Code

"To be an Error and to be Cast out is part of God's Design."

William Blake

- Noise as a longstanding problem in information processing systems
 - e.g., classical computers, modems, CD players, etc.
 - Noise is still a problem in quantum information
- Key idea: to protect a message against noise, *encode* the message by adding redundant information; even if some information is corrupted, redundancy allows us to *decode* and recover the original message

Project Framework

- Goals:
 - to implement various quantum error-correcting codes
 - we chose the 3-qubit, 9-qubit, 7-qubit codes
 - to analyze and compare their performances
 - *when are they effective?*
 - *when should we use error-correcting codes?*
- Tools:
 - Python's Qiskit package
 - IBM's quantum machines

3-Qubit Codes: A Review

Classical Inspiration

- Encoding by *repetition codes*:

$$0 \rightarrow 000$$

$$1 \rightarrow 111.$$

- Decoding by *majority voting*:

$$\text{Ex.: } 001 \rightarrow 0.$$

- Analysis: Let p be the probability that a bit is flipped. This method fails when 2 or more bits are flipped, which occurs with probability $3p^2(1-p) + p^3$, so the probability of error is $p_e = 3p^2 - 2p^3$. Then this method is preferred when $p_e < p$, or $p < 1/2$.

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- The goal is to correct bit flip errors.
- Encoding:

$$|0\rangle \rightarrow |0_L\rangle \equiv |000\rangle$$

$$|1\rangle \rightarrow |1_L\rangle \equiv |111\rangle .$$

- Encoding circuit for 3-qubit bit flip code:

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- Suppose there is a bit flip error after encoding:

- Error Detection (or *syndrome diagnosis*):
 - we would like to determine which, if any, of the qubits have been corrupted
 - four error syndromes: no error, bit flip on qubit one, bit flip on qubit two, bit flip on qubit three

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- Error Detection (or *syndrome diagnosis*):
 - we can diagnose the syndrome using two ancillary qubits:

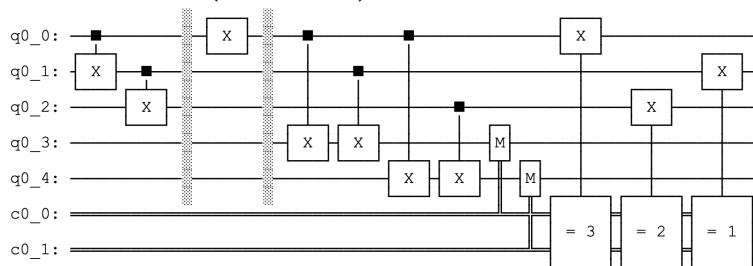

- Based on measurement results, we know where the error occurred.

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- Error Correction (or *recovery*):

The Shor Code

7-Qubit Code

Encodes 1 logical qubit using 7 physical qubits:

$$|\bar{0}\rangle = \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}}$$

$$|\bar{1}\rangle = \frac{|1111111\rangle + |0101010\rangle + |1001100\rangle + |0011001\rangle + |1110000\rangle + |0100101\rangle + |1000011\rangle + |0010110\rangle}{\sqrt{8}}$$

$$H^{\otimes 7} |\bar{0}\rangle = \frac{|\bar{0}\rangle + |\bar{1}\rangle}{\sqrt{2}}$$

$$H^{\otimes 7} |\bar{1}\rangle = \frac{|\bar{0}\rangle - |\bar{1}\rangle}{\sqrt{2}}$$

7-Qubit Code

$$|\bar{0}\rangle = \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}}$$

$$|\bar{1}\rangle = \frac{|1111111\rangle + |0101010\rangle + |1001100\rangle + |0011001\rangle + |1110000\rangle + |0100101\rangle + |1000011\rangle + |0010110\rangle}{\sqrt{8}}$$

$$H^{\otimes 7} |\bar{0}\rangle = \frac{|\bar{0}\rangle + |\bar{1}\rangle}{\sqrt{2}}$$

$$H^{\otimes 7} |\bar{1}\rangle = \frac{|\bar{0}\rangle - |\bar{1}\rangle}{\sqrt{2}}$$

- Of the 16 bit strings above, any two differ by ≥ 3 bits
- Intuition: therefore a single bit flip can be recovered
 - X error flips bit in $|\bar{0}\rangle, |\bar{1}\rangle$
 - Z error flips bit in $H^{\otimes 7} |\bar{0}\rangle, H^{\otimes 7} |\bar{1}\rangle$

Example recovery for X error in qubit 3

$$|\bar{0}\rangle = \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}}$$

$$X^{(3)} |\bar{0}\rangle = \frac{|00\textcolor{red}{1}0000\rangle + |10\textcolor{red}{0}0101\rangle + |01\textcolor{red}{0}0011\rangle + |11\textcolor{red}{1}0110\rangle + |00\textcolor{red}{1}1111\rangle + |10\textcolor{red}{0}1010\rangle + |01\textcolor{red}{0}1100\rangle + |11\textcolor{red}{1}1001\rangle}{\sqrt{8}}$$

$$\begin{pmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} = |3\rangle \text{ (in binary)}$$

Example recovery for X error in qubit 3

$$|\bar{0}\rangle = \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}}$$

$$X^{(3)} |\bar{0}\rangle = \frac{|00\textcolor{red}{1}0000\rangle + |10\textcolor{red}{0}0101\rangle + |01\textcolor{red}{0}0011\rangle + |11\textcolor{red}{1}0110\rangle + |00\textcolor{red}{1}1111\rangle + |10\textcolor{red}{0}1010\rangle + |01\textcolor{red}{0}1100\rangle + |11\textcolor{red}{1}1001\rangle}{\sqrt{8}}$$

$$\begin{pmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} = |3\rangle \text{ (in binary)}$$

Example recovery for X error in qubit 3

$$\begin{aligned}
 |\bar{0}\rangle &= \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}} \\
 X^{(3)} |\bar{0}\rangle &= \frac{|00\mathbf{1}0000\rangle + |10\mathbf{0}0101\rangle + |01\mathbf{0}0011\rangle + |11\mathbf{1}0110\rangle + |00\mathbf{1}1111\rangle + |10\mathbf{0}1010\rangle + |01\mathbf{0}1100\rangle + |11\mathbf{1}1001\rangle}{\sqrt{8}}
 \end{aligned}$$

$$\begin{pmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} = |3\rangle \text{ (in binary)}$$

Example recovery for X error

- In fact:

$$\begin{pmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{pmatrix} X^{(i)} |\bar{0}\rangle = |i\rangle \text{ (in binary) for all } i = 1, \dots, 7$$

- Let H be matrix above. To recover from single X error, apply map

$$|v\rangle \otimes |0\rangle_A \mapsto |v\rangle \otimes |Hv\rangle_A$$

and measure subsystem A . Result will be index i of bit flip, in binary!

- Also works for logical state 1, and for phase flips.

7-qubit code: Why does it work?

- The kernel of the matrix

$$H = \begin{pmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{pmatrix} \in \mathbb{F}_2^{3 \times 7}$$

consists of the 16 bit strings defining $|\bar{0}\rangle, |\bar{1}\rangle$

- A bit flip at position i of a vector v adds the i th row of H to Hv (basic linear algebra)
- The i th row of H is i in binary
- Same reasoning for phase flips = bit flips in rotated basis

7-qubit code: Initialization

$$|\bar{0}\rangle = \frac{|0000000\rangle + |1010101\rangle + |0110011\rangle + |1100110\rangle + |0001111\rangle + |1011010\rangle + |0111100\rangle + |1101001\rangle}{\sqrt{8}}$$

$$|\bar{1}\rangle = \frac{|1111111\rangle + |0101010\rangle + |1001100\rangle + |0011001\rangle + |1110000\rangle + |0100101\rangle + |1000011\rangle + |0010110\rangle}{\sqrt{8}}$$

$|\psi\rangle \rightarrow$

$|0\rangle \rightarrow$

$|0\rangle \rightarrow$

$|0\rangle \rightarrow$

$|0\rangle \rightarrow$

$|0\rangle \rightarrow$

$|0\rangle \rightarrow$

7-qubit code: Flip correction
