"To be an Error and to be Cast out is part of God's Design."

William Blake

- Noise as a longstanding problem in information processing systems
 - e.g., classical computers, modems, CD players, etc.
 - Noise is still a problem in quantum information
- Key idea: to protect a message against noise, *encode* the message by adding redundant information; even if some information is corrupted, redundancy allows us to *decode* and recover the original message

Project Framework

- Goals:
 - to implement various quantum error-correcting codes
 - we chose the 3-qubit, 9-qubit, 7-qubit codes
 - to analyze and compare their performances
 - *when are they effective?*
 - *when should we use error-correcting codes?*
- Tools:
 - Python's Qiskit package
 - IBM's quantum machines

Classical Inspiration

- Encoding by *repetition codes*:

$$0 \rightarrow 000$$

$$1 \rightarrow 111.$$

- Decoding by *majority voting*:

$$\text{Ex.: } 001 \rightarrow 0.$$

- Analysis: Let p be the probability that a bit is flipped. This method fails when 2 or more bits are flipped, which occurs with probability $3p^2(1-p) + p^3$, so the probability of error is $p_e = 3p^2 - 2p^3$. Then this method is preferred when $p_e < p$, or $p < 1/2$.

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- The goal is to correct bit flip errors.
- Encoding:

$$|0\rangle \rightarrow |0_L\rangle \equiv |000\rangle$$

$$|1\rangle \rightarrow |1_L\rangle \equiv |111\rangle .$$

- Encoding circuit for 3-qubit bit flip code:

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- Suppose there is a bit flip error after encoding:

- Error Detection (or *syndrome diagnosis*):
 - we would like to determine which, if any, of the qubits have been corrupted
 - four error syndromes: no error, bit flip on qubit one, bit flip on qubit two, bit flip on qubit three

3-Qubit Codes: A Review

The Quantum Version: 3-Qubit Bit Flip Code

- Error Detection (or *syndrome diagnosis*):
 - we can diagnose the syndrome using two ancillary qubits:

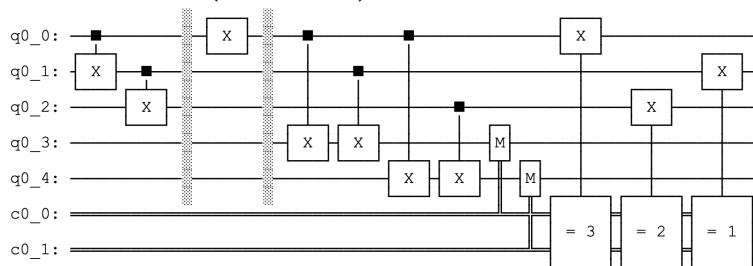

- Based on measurement results, we know where the error occurred.
